Do you know that a giraffe may grow more than six meters tall? Yes, the giraffe is a very tall animal. In fact, it is the tallest animal in the world.

A giraffe has a very long neck. Unfortunately, the giraffe cannot bend its neck easily. Thus, when it wants to drink water at a pool, the giraffe has to spread its front legs apart, so it can reach the water.

A giraffe feeds on plant only. Hence, it can reach the leaves on trees easily because of its height. Also, a giraffe has a very long tongue — about 0.5 meters long. The giraffe uses this long tongue skillfully to pick leaves off plants and trees.

This tall animal can protect itself very well. It has a very good sense of smell and sight. It can hear very well, too. It can also gallop very fast —at a speed of 50 km/h.

The giraffe's hind legs and long neck are also very useful. For example, a giraffe can kick its enemy with its hind legs or even hit out with its long neck.

What does a giraffe use to kick its enemy?

A) Front legs.

B) Bent neck.

A giraffe has a very long neck. Unfortunately, the giraffe cannot bend its neck easily. Thus, when it wants to drink water at a pool, the giraffe has to spread its front legs apart, so it can reach the water.

A giraffe feeds on plant only. Hence, it can reach the leaves on trees easily because of its height. Also, a giraffe has a very long tongue — about 0.5 meters long. The giraffe uses this long tongue skillfully to pick leaves off plants and trees.

This tall animal can protect itself very well. It has a very good sense of smell and sight. It can hear very well, too. It can also gallop very fast —at a speed of 50 km/h.

The giraffe's hind legs and long neck are also very useful. For example, a giraffe can kick its enemy with its hind legs or even hit out with its long neck.

Whales are sea-living mammals. They therefore breathe air but cannot survive or land. Some species are very large indeed and the blue whale, which can exceed 30 meter length, is the largest animal which lives on earth. Superficially, the whale looks rather like a fish, but there are important difference in its external structure; its tail consists of a pair of broad, flat horizontal paddles (the tail of a fish is vertical) and it has a single nostril on top of its breadth, broad head.

The skin is smooth and shiny and beneath it lies a layer of flat (blubber). This is up to 30 meter in thickness and serves to conserve heat and body fluids.
